

 **VBLINSURANCE**

The mere necessity to report damages often results in customer frustration. The complicated, stretched-out procedures and the need to wait for the expert who will assess the damage further reinforces the dissatisfaction.

The **VBL INSURANCE** application will make the filing and resolution process proceed quickly, efficiently, without unnecessary complications.

HOW DOES IT WORK?

1. You noticed that your car is damaged.

2. You file a 'new' complaint.

3. You record a short video describing and showing the damage.

4. You enter all the formal information regarding the damage and how it occurred. Take a photo of the proof of registration, police notes, driver's license, scan the QR code.

5. Send the complaint.

6. You will now receive a PUSH notification about the status of your complaint.

7. The insurance company will now prepare a quota and send it back to you.

8. Once you will receive the quota, you can either accept or reject it.

OPTIDATA specialises in creating, delivering and servicing mobile solutions for business applications for 15 years. We have already created over 15,000 functioning mobile applications! The systems implemented by us are based on professional proprietary software, working with superior customer systems, including the POS systems.
